PT Tracker v5.3 – Installation on Windows

9/10/23

Contact info@loco4learning.com if you have any questions.

1. Download the PT Tracker installer "PT-Tracker-5.3-install.exe" by going to the Loco4Learning website:

   https://loco4learning.com/download/pt-tracker-v5-3-for-windows/

2. After the download is complete, open the file "PT-Tracker-5.3-install.exe". There are various ways to do that. For example, you can double-click on it in your Downloads directory.

   - After PT Tracker has been installed: In the Apps or Start menu, look for PT Tracker. If you can't find PT Tracker, look for the Loco4Learning folder; PT Tracker will be in the folder.

3. If this is the first time you have run PT Tracker on your computer, read Set Database Directory below.

Set Database Directory

By default, PT Tracker stores its database of student files in the installation directory. That's not usually a good place to store them, so, the first time you use PT Tracker:

1. Use File Explorer to create a new directory where you'd like to store the student files.

2. In PT Tracker, use the **Settings menu** to select *Change/save default database directory*, then select the directory you created. That directory will be stored in PT Tracker's settings file so that PT Tracker will remember your selection the next time you start it.
